

Taking the Pulse of our Planet

Observe seasonal changes in plant and animal life cycles to help reveal how climate change is impacting our environment!

Changes in climate and our environment are affecting plant and animal activity across the nation.

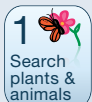

This affects our economy, health, agriculture, natural resources, and other aspects of human well-being.

We need your help!

USA-NPN is recruiting tens of thousands of volunteers across the country to gather data to help:

- predict wildfires and pollen production
- detect and control invasive species
- monitor drought conditions
- assist in agricultural decision-making
- evaluate impacts of climate change

To participate, go to www.USANPN.org and follow 4 easy steps!

1 Learn about the plants and animals you can observe.

2 Learn how to select a site, select your plants and animals, and record your observations.

3 Sign up to be an observer.

4 Start reporting your observations online.

USA-NPN is a partnership of federal and state agencies, NGOs, academic researchers, and the public.
