

What was the most difficult part of this activity?

What other information might you need to better make your observations?

What other phenophases might be observable other than the ones listed on this activity?

How might phenology information be valuable to:

- A gardener?

- A climate researcher?

- A teacher?

- A family?

What questions do you have about plants and animal phenophases?

What questions do you have about phenology or journaling?

Would you do this activity for a long period of time? Why or why not?
