Changes in climate are affecting plant and animal activity across the nation. These modifications impact our economy, human health, natural resources, and agriculture. Join us–help document how things are changing!

Why participate in Nature’s Notebook?

- It’s **interesting**: You will be surprised at what you see when you watch carefully!
- Reports are **valuable**: Your observations can help researchers better understand how plants and animals are responding to a changing environment.
- Your observations will be used to **improve decision making** pertaining to wildfire protection, allergy and asthma alerts, invasive species management, and more.

Become an observer in 3 simple steps:

1. Join the program
2. Set up your account
3. Go outside and observe!

Go to [naturesnotebook.org](http://naturesnotebook.org) to Get Started!
